

Dynamic staff and strong partners network

We employ a permanent team of 20 people and create each season more than 250 seasonal jobs through the areas of Bamako, Koulikoro and Sikasso. Our Strength relies on our ability to build sustainable relationships based on trust with our partners.

We train and monitor our staff, we make long term contracts with our suppliers and we stay close of our clients and technical, financial partners by visiting or receiving them very often.

We are also contributing actively to the Malian professional association for Mango.

Sustainable development

We are committed to our stakeholders and partners for the improvement of social and environmental impacts of our activities. We value the employment of young people and women who represent more than 70% of the staff.

We adhere to the Business Social Compliance Initiative (BSCI) Code of Conduct aiming the improvement of working conditions, and the prohibition of child labor, abusive and forced labor, and any violation to international and national standards and laws. We are involved on the associative and social life of our production sites and commit to improve living conditions of rural populations by bringing free access to water and electricity.

SCS International is a Malian Agribusiness Company. Our core business is the production and export of Fresh Mangoes to Europe (The Netherlands, France, Belgium, UK, Spain, and Germany) and Africa (Morocco, Gabon).

Our goal is to develop our activities by valuing all the stakeholders involved, with a special attention towards rural populations to whom we provide important incomes.

Our mission is to increase our activities through expertise and excellence at an international level. We guarantee our clients a product of highest quality, an impeccable service and a sustainable partnership.

Real vision and integrated strategy

We have developed our activities in the field of Fresh Mango for the last ten years, by increasing exponentially our volumes, moving from 22 tons exported in 2007, to more than 1200 tons in 2013. This success relies on our real expertise and experience, but also on a strategy of control of the supply chain by establishing at all levels good relationships with our partners.

The objective for the five next years, is to reach 6000 tons exported, from Mali, but also from other West African countries such as Ivory Coast, Guinea, and Senegal, where we plan to set up subsidiaries.

Quality: a constant challenge for a high potential fruit

Mango has recently become a star product, highly demanded, and appreciated for its good taste and natural virtues. To grow, this high potential business demands strict quality standards as a condition for market access. SCS International is internationally recognized as meeting this quality.

We position ourselves in the niche market of Fresh Mango sold through internationally respectable supermarkets (Carrefour, Albert Heijn, Lidl, Tesco). We continuously improve our quality management system and apply rigorous controls at all levels so the final consumer can then access the taste and quality of our sun ripened fruits, safe in the knowledge that they are simply eating the best and safest Mango there is to buy.

Small farmers in the heart of the process

SCS is supplied by a cooperative of more than 300 small producers under contract and whose orchards are certified according to international food safety standards: Global Gap, Organic.

Producers benefit from a constant monitoring of their orchards by a trained quality team. The value added to their product constitutes a major source of revenues and allow them to increase their incomes. Thus, in 2013, more than three hundred thousand (300.000) Euros, were distributed, allowing more than a thousand people from rural areas to live better.

Modern and innovative company

Since 2010, we are developing our own production in an industrial orchard through our subsidiary SCS FF Production. On a surface of 200 hectares, 40 000 trees will provide more than 5,000 tons of export-quality mango, with appropriate monitoring and the use of modern technologies such as drip irrigation.

This orchard is intended to serve as a training and demonstration center, to guide farmers in the process of rejuvenation and restructuring of their traditional orchards.
